Market Data Bandwidth Profiles

Issue 2.0

The London Stock Exchange Group plc (the “Group”) has attempted to ensure that the information in this document is accurate, however the information is provided “AS IS” and on an “AS AVAILABLE” basis. The Group does not guarantee the accuracy, timeliness or completeness of this document or any of the information in it. The Group may vary this document from time to time at its discretion and will provide notification of such variations via its Service Announcements.

Market Data Bandwidth Profiles

In order to provide greater transparency and assist our clients in future capacity planning, the Group has published projected Extranex bandwidth figures. In addition to the Q3 2011 and Q4 2011 data expectations, the tables below also include forecasts of the future market growth in Q1 2012 and Q2 2012, which are indicative only.

These profiles are based on an aggregated model, which analyses data at a **inter-second** (highlighted in black) and **intra-second** level. The model is based on historical data which identifies peaks across all of the markets currently supported by the Group¹. The rows displaying intra-second peaks for the LSE Standard Data Delivery structure are highlighted in blue, while rows displaying intra-second peaks for the LSE Optimised Data Delivery structure are highlighted in green. Clients subscribing to Turquoise will only be receiving optimised data.

Date	LSE				Turquoise	Borsa Italiana (Bit)			TQ / Oslo Derivatives	IDEM Derivatives	JSE			Oslo			All Markets

Extranex Circuit Recommendation

Based on the bandwidth projections above, customers subscribing to all markets should upgrade to the Extranex 1Gb circuit.

¹ All Markets do not peak at the same time, and this has been reflected in the All Markets Total Bandwidth calculation. DDM Plus market data bandwidth is not included.
