

Exchange Hosting

Exchange Hosting is our new connectivity service that provides customers with the fastest possible access to the Exchange's trading and information systems. This service allows trading participants to locate their servers within the Exchange's own data centre, providing sub-millisecond access to the Exchange's matching engine and market data.

This new service underlines the Exchange's commitment to encouraging market efficiency through the reduction of latency, and further extends our variety of connectivity options by providing the ultimate choice in low-latency connectivity.

Key benefits of Exchange Hosting include:

- Hosting physically within the Exchange's managed data centre - as close as possible to the matching engines.
- Reduction of overall latency between the Exchange's TradElect and Infolect systems and your trading applications, by reducing latency across the network delivery path.
- A purpose-built data centre, providing high standards in terms of security, access, power and cooling, entirely managed by the Exchange.
- Potential to access any of the London Stock Exchange Group's markets.
- Access from within the facility to low latency, normalised market data from key European, North American and Asian trading venues.
- A choice of procuring resilient leased management lines from the Exchange or direct from a list of incumbent low latency carriers.

Customers taking advantage of Exchange Hosting have the opportunity to access Europe's deepest pool of liquidity fast and efficiently, thereby:

- increasing chances of execution and probability of accessing available liquidity
- improving the performance of algorithmic trading strategies
- ability to react more quickly to market changes
- reducing opportunity cost of trading.

If you would like to find out more about the new service please contact our Exchange Hosting team on **+44 (0)20 7797 3068**, or email **hosting@londonstockexchange.com**.
